

White. 1620.

A new Almanack, and Prog-
nostication for the yeare of
our Lord God, 1620.

Being the Bissextile or Leape yeare
Calculated for the Meridian of
the most Honorable Citty of
London, & will serue gene-
rally for the Monarchie
of great Brittain.

By Iohn White, Wellwiller to
the Mathematickes.

Genesis. 1. 14.

God said, let there be lights in
the firmament of the Heauen,
to seperate the day fro the night,
and let them be for signes, & for
seasons, and for dayes, & yeares.

LONDON.

Printed for the Company of
Stationers. 1620.

The beginning and ending of the Termes, with
their Returnes this present
Yeare. 1620.

Hillary Terme - beginneth the 24. of Ianuary, and endeth
the 14. of February. and hath 4. returnes.

{ Octab. Hillar. }
{ Quind. Hillar. }

{ Craft. Purifi. }
{ Octab. Purifi. }

Easter Terme beginneth the 3. of May, and endeth the
29. of the same month. and hath 5. returnes.

{ Quind. Pasch. }
{ Tres Pasch. }

{ Mens. Pasch. }

{ Quinq; Pasch }
{ Craft. Ascen }

Fittime for Blood-letting.

Let blood the sanguine, fro the new moon to the first quar.
The Cholericke, from the first quarter to the full.
The flegmatick, from the new moone to the last quarter.
The Melancholy, from the last quarter to the new moon.

Dangerous times for Blood-letting.

It is dangerous to let Blood in the heate of Summer
or colde of Winter, and when the Moone is in that signe
which gouerneth that part of the Body you would let
Blood. Likewise, within two dayes of the Change, or
full of the Moone it is not to be done without urgent
cause, as the Apoplexie, Squinancie, or such violent
Maladies.

To the Courteous and friendly
Readers.

Gentle Reader, there is lately inuented and brought
foorth (by Mr. William Prar) a most excellent Instru-
ment or Table, (not exceeding the proportion of a Ta-
ble-booke) called the Arithmeticall Jewell, with a
Booke of its singular vse, performing (without Pen,
Incke, or Paper) both in the first and second part of Ar-
ithmetike whatsoeuer hath or may bee done thereby,
with more brieft and ready wayes, then euer heretofore
haue bene knowne: which Instrument is made in Fe-
uoy, or Mettle, by Robert Lynbrough, Gold-Smith in
Gutter-Lane.

The Anatomie of Mans body, as the parts there-
of are gouerned, by the twelue
Celestiall Signes.

Aries, Head and face.

Taurus,
Necke & throat.

Cancer,
West stomach,
and ribbes.

Virgo,
Bowels and
Belly.

Scorpio,
Secret mem-
bers.

Capricornus
The knees.

Gemini,
The Armes
& shoulders.

Leo,
Heart and
Backe.

Libra,
Reynes and
loynes.

Sagittarius,
the Thighes.

Aquarius,
The Legges.

Pisces, The Feet.

Januarie hath xxxj. dayes.

White. 1620.

*A Prognostication, for
this yeere of our Lord
God, 1620.*

Being the Bissextile or Leape yeere.

Wherein is conteyned the estate of the whole
Yeere, the disposition of each Quarter, and the
inclination of the weather for every Quar-
ter of the Yeere throughout the
whole yeere.

Together with the rising and setting of the Planets,
and the good and euill dayes for each Moneth of
the yeere: with such sundry aduertisements,
and other things fit to be knowne, both
pleasant and profitable.

With a briefe Calender for this yeere, 1620. which be-
ing cut out, is fit to be placed into a Table booke,
Booke of Accompt, or other.

By Iohn White, well-willer to
the Mathematickes.

Imprinted at London for the
Company of Stationers.

1620.

A briefe Computation of time compleat within this present yeare 1620.

F rom the Creation of the World untill this present	5582.

*A briefe Declaration of the
Disposition of the foure Quar-
ters of this Yeare 1620.*

And first of Winter.

*The Winter Quarter best doth prophesie
To all Degrees, and Sexes, their estate.*

Sol in Capricorne, Aquarius, Pisces.

The hoary headed Winter Quarter, both take his first entrance when the Sunne doth touch the first degree of the earthly Signe Capricorne, (whose beginning did happen the last Yeare 1619. upon the twelfth day of December) and doth this Yeare 1620. continue to the tenth day of March, and endureth whilst the Sunne doth passe through these three Hymall, or winterlie Signes, Capricorne, Aquarius, and Pisces.

This Quarter naturally is cold & moyste, and taketh chief part of the Phlegmatick Complexion, which Element doth rule every day in the yeare, from six. of the clock after-noon, untill six. of the clock at night. The Seas do break forth in hydeous Tempests, and the Villowes swell with the raging winds: and the painfull Parturient is in danger of many a Shipwacke. Flouds do increase Daies decrease, and Nightes do lengthen: the Ayre watcheth cold, and enfeebles the strength of all living creatures: The pores of the Earth are shut up by the coldnesse of the ayre: The Beastes betake them to their Melters: Fowles to the war-mer Regions, and Fishes to the deep of the waters: For whatsoever the cheerefull Spring recomforable Sommer doth bring forth and nourish, this comfortlesse Quarter doth brevilie destroy: yet the colder and drier it is, is most wholesome, but too much cold killeth trees in a warme Region: A warme and moyste Winter is unwholesome, and no

A Prognostication.

friends to the Husbandman, but indifferent store of Snow doth
ranken the fields, and pierceth Corno. It is necessary that
we do know the such Heates whose operation are hot and
dry: Now are the outward parts of the body much impa-
uerished & weakened by the coldnes of the ayre, and naturall
heate takes place in the inward parts of the body, to com-
fort the vitall spirith, and to helpe digestion: Therefore ex-
pell the coldnes of the ayre by warme drinks, strong wines,
and comfortable Brothes, and be careful to keepe thy head
and feete from cold and wet: But yett will the body digest
more grosse and strong meates then in Sommer, by reason of
the heat inwards.

The Diseases commonly attending this Quarter are these,
or the like, Soie Eyes, Tooth-ach, Rheumes, Coughes,
Cathars, Poles, Cramps, Goutes, Palsies, Fluxes, &c.

Of the second part of the Year, called the Spring.

*The Spring compared is to Infancy,
To spring and grow in virtue till we dye.*

Sol in Aries, Taurus, Gemini.

The Spring doth take his beginning when the Prince of light
(the Sun) doth enter into the first degree of the first Equinos-
tial signe Aries, (which is on the 21 day of March) which Quarter
doth continue till he hath trauesed these 3. verball Signes, Aries,
Taurus, & Gemini, and endeth on the thirteenth day of Iune.

By nature this Quarter is of disposition hot and moist, being
of the Sanguine complexion; which Element hath chiefe predom-
ination from nine of the clocke at night, till three of the clocke in
the morning. The dayes are now equall in length to the nights,
and the glorious Sun casteth a smiling countenance on Terras
louely beauty, whose cheerefull raies giues comfort to all Crea-
tures. Of all the Quarters in the yeere, this is the most wholesome
and pleasant, & the most expedient to ridde one of Diseases that haue
been of long continuance. The Fowles of the ayre doe couple,
Beasts

White. 1620.

Beasts of the Earth doe increase, and the Fishes of the Water doe multiply in abundance, leaving the deepe to live in shallow places: The fruitful earth produceth all manner of Plants and Herbes, for the necessary use of Man and Beast. If the Spring be once wet, fruit will bee rotten and scarce, and weeds will abound: It is now good to take somewhat smaller & cooler drinks then in Winter, & abate somewhat in eating, and take such things whose operation is hot and dyle: Purgings, Sweating, Batching, and bleeding this quarter are good, if needs require.

The Sickneses usual to this Quarter are, Agues, small Poxe, Measels, Scabs, Pusshes in the face, Phenykes, Kings eull, and the like.

Of the third part of the Yeare, called Summer.

*Like Man in his chiefe state and lusty yeares,
The ripening Summer Quarter best appeares.*

Sol in Cancer, Leo, Virgo.

Summer taketh his beginning when the Sunne doth make his Entrance into the first degree of Cancer, which doth happen upon the thirteenth day of June, and continueth while he passeth through these three Solstitiall Signes, Cancer, Leo, and Virgo, and endeth upon the thirteenth day of September.

The disposition of this Quarter is heate and drynesse, and is of the Chollericke complexion; which doth governe from three of the Clocke in the morning, untill nine before noone. Heate and drynesse is now at the highest period. Floures at the lowest fall, & Ceres reeds comfort to all the Earths Inhabitants: The Day is lengthen, Nights do shorten; the Winds are patient, and Seas calme: Fruits are in their prime, and Flowers in their beauty; Bees gather their Houney, and the Husband man his harvest: Naturall heat is now dispersed into the outward parts of the bodie, and we are not now so hot within as in Winter, and our digestion is not so strong: Small and coole drinks are most requisite for our bodies, and the best sort of meate doth best suffice.

A Prognostication.

Signature, also that which is boyled is the most wholesome, and take such things whose operation is cold and moist, & wet Summer doth purrifie Fruits, and spoileth Graine.

The Diseases are these, of the like, as Feuers, Agues, Pleurisie, & gripes, griefe in the Head and Belly.

Of the fourth part of the Yeere, called Autumne or Haruest.

*As Autumne steales the sappe from Tree and Flower,
So Death comes creeping neerer euery houre.*

Sol in Libra, Scorpio, Sagitt.

Autumne, commonly called Haruest, or the fall of the Leafe, doth take his beginning when the Sonne doth enter into the first degree of Libra, which is upon the thirtieth day of September, and doth continue untill he doth passe through these three Autumneall Signes, Libra, Scorpio, & Sagittari, (The Sonne being now seated in the second Equinoctiall) which Quarter endeth on the xij. of December.

The naturall disposition of this Quarter is to be cold and drie, and participateth of the Melancholy Complexion: which Element doth generate from nine of the clock in the morning till three afternoone: The daies are now againe equall in length to the nights: Cattle is now mowed, and the Cozne is reaped, all fruits are gathered, and leaues do fall: Trees are now left naked, The springs doe fall, yet floods doe rise, All liuing Creatures prouide themselves for winter against ensuing Winter stormes. If Autumne prove colde, Haruest fruits shal be both quantitie, nice, and beaue. Of all the other Quarters it is the most wholesome and most salutary to Sickneses and it steales then any other, and therefore beware of the Cooling and Moyning colde.

Sicke

White 1620.

Sickneses commonly attending this Quarter are these; the
 flke, Paine of the Backe, Kidneys, and Eyes, the Stone, Pe-
 lance-oly, Agues, Falling Sickneses, Stures of bloud, Flux-
 iacs, Emproos, Splenis: From which good Loyd deliver vs
 miserable Sinners, Amen.

The rising and setting of the Planets, with the
 disposition of the Weather for every Quar-
 ter of the Moone, together with the good and
 euill dayes, throughout the whole year.

Of January.

☿ Sunne is toward the West at Sunset.

♃ Jupiter is nere the South at Sunne rising.

The Explanation of this former Table for this Yeere 1620.

J. Note that Saturne is in Gemini, from the first day of January, till the ninth day of July, which sheweth griefe of the belly, and heart, then from the ninth of July to the end of the yeare he is in Cancer, which sheweth much paine in the Reines, Belly, and Secrets.

J. Then from the first of January to the 22. of April, Jupiter is in Aries, which sheweth griefe in the Backe, Throat, Heart and Belly. Then from the 22. of April to the end of the yeare, he is in Taurus, &c.

J. Mars, from the first of January to the 22. is in Aquarius, shewing paine in the Wrist, Legges, and Heart. From the 22nd of

of January to the xxviii. of February he is in Pisces. from thence to the xxix. of March, in Aries: from thence to the ix. of May in Taurus: From thence to the xxii. of June in Gemini: From thence to the vi. of August in Cancer: From thence to the xxii. of September in Leo: From thence to the xi. of November in Virgo: From thence to the xvi. of the year in Libra. &c.

○ As for the place of the Sunne, you shall finde it in the Kalender, set downe in red Letters, amongst the Sunnes dales, next the middle of every month.

☿ Venus, from the first of January to the xxviii. is in Aquarius, from the xxviii. of January to the ix. of February in Pisces; from thence to the xv. of March in Aries; from thence to the ix. of April in Taurus: from thence to the v. of May in Gemini; from thence to the last of June in Cancer; from thence to the xxviii. of June in Leo; from thence to the first of August in Virgo; from thence to the xxi. of September in Libra: From thence to the xxiii. of October againe in Virgo: from thence to the xxviii. of November in Libra, from thence to the xvi. of December in Scorpio: from thence to the ende of the year in Sagittary.

☿ Mercury, from the first of January to the first of March is in Aquarius. from thence to the xix. of the same Month he is in Pisces. from thence to the third of April in Aries, from thence to the xxii. in Taurus, from thence to the xxviii. of June in Gemini, from thence to the xiii. of July in Cancer, from thence to the last day in Leo, from thence to the xvi. of August in Virgo, from thence to the xxiii. of October in Libra. from thence to the xi. of November in Scorpio, from thence to the last of November in Sagittari, from thence to the end of the year in Capricorne.

☾ As for the place of the Moone you shall finde it likewise in the Kalender, ordinarily placed against every day of the Month, &c.

Note also, that the chiefe Significators of Sickneses and Diseases are Saturne and Mars.

A Prognostication.

How to iudge what Weather will follow,
by the rising and setting of the Sunne.

The Sunne rising bright and cleare, signifieth a pleasant day :
If he rise fiery red, it promisseth raine : If in his rising hee bee
thickly overcast with a cloud, it betokeneth foule weather: If the
Sun drive the clouds before him into the West, it signifieth fa-
ir weather: If at his rising there appeare a circle about him, & ha-
nisheth away equally, it betokeneth faire weather. Also, if he seteth
red, it signifieth faire weather: If at his setting he be of divers co-
lours, or clouds like water, it threatneth raine. If at the rising of
the Sun, his beames seeme red, or long, or incompassed with red
clouds, it signifieth great windes: If at his setting there appeare a
thicke mist, or if it rafneth in the evening, it threatneth very foule
weather to follow. Also, if the Sunne beames be spotted eyther
green, pale, or blacke, gathered into a cloud, it signifieth raine. The
Sun setting cleare without any cloud, signifieth a faire night to
ensue. If the circle, or circles about the Sun be cleare, & of no con-
tinuance, looke for faire weather: If there be many circles, it sig-
nifieth windes: the redder they are, the more vehement winds. If
the circles are heere and there broken, and are thicke and blacke,
looke for cold wind or snow: Or, if he setle behinde a great black
cloud, raine followeth.

How weather is foreknowne by the Moone.

If the Moone in the third day of her change, or three daies before
her full, or in the midst of the quarter, be formed of pure light, no-
thing encompassing her, the ends direct vp, shee promisseth faire
weather: but bent to red color, promisseth winds. The Moone pale,
or somewhat blacke or thicke, threatneth raine. When the Moone
be fower daies olde, marke the tips of her hornes, if they be blunt, it
signifieth raine: if they be pointed and pricking with sharpe, great
winds. If in the fourth day after her change, she haue a red circle
about her, it signifieth winds and raine.

Of the iudgement of the weather by the Stars.

If the Starres appeare of much light, and seeme to be of more
brilliance & blazing then ordinary, it betokeneth great windes &
moysture

moisture in that part where they seeme to : and in Winter, great frostes. When diuine Starres appeare with long fiery tayles, it threatneth winds, and great drought : the more in number, the greater will be the effect. Also, when Starres seeme to shoot or fall, it signifieth great winds in that place: If they seeme to shoot in diuers places, it signifieth diuers winds : If in all places, winds, thunder, lightning, and most tempestuous weather.

**A short Instruction, and very necessarie to know
the times and seasons when to Sow, and replant
all maner of Seedes for the Garden.**

Sow Cabbages in Februarie, March, or Aprill, in the decline of the Moone : and replant them in the Decrease.

Sow Cabbage-Lettuce in Februarie, March, or Iuly, in the old of the Moone.

Sow Onions and Leekes, in February or March, at the decline of the Moone.

Sow Beets in Februarie or March, at a full Moone.

Sow Coleworts white & Greene, in the middle of August or September : Plant the young ones in October, and sett them againe in November.

Sow Parsneps in Februarie, Aprill, or Iune, in a faire day.

Sow Rashi in Februarie, Aprill, or Iune, in the increase of the Moone.

Sow Pumpions, Cucumbers, Melons, and Gourdes, in February, March, or Iune, in a hotte and faire day.

Sow Spinage in Februarie or March, in the old of the Moone

Sow Parsley, Fennell, and Anis-seede, in February or March at the full of the Moone.

Sow white Cicory in February, March, Iuly, or August, in a full Moone.

Sow Cardus-benedictus in February, March, or May, when the Moone is old.

Sow Basil in March, in an old Moone.

Sow Purslaine in February, or March, in the increase of the moone.

Sow Marjoram, Chlores, Tyme, Flewr-gentle, Roman, &
Lauender,

A Prognostication.

- Sow** Lardner, in February, March, or April, in the increase of the Moone.
- Sow** Garden-creases, and Rocket, in February, at the increase of the Moone.
- Sow** Sauell in February or March, at a new Moone.
- Sow** Saffron in March, when the Moone is old.
- Sow** Conander, and Bezage, in February or March, in the increase of the Moone.
- Sow** Hartes-home, & Samphire, in February, March or April, in the old of the Moone.
- Sow** Gillsflowers, Harts-eale, and Mal-flowers, in March or April, in an old Moone.
- Sow** Cardons, and Artichokes, in April or March, when the Moone is old.
- Sow** Chickweed, in February or March, at $\frac{1}{2}$ full of the Moone.
- Sow** Burnet in February or March, when the Moone is old.
- Sow** Hysope and Sauery in March, when the Moone is old.
- Sow** double Marygolds in February or March, in the increase of the Moone.
- Sow** Larks-foote, Sparges, and Sperage, in February, in an old Moone.
- Sow** white Poppy, and Palma-christi, in February or March, in the increase of the Moone.
- Sow** all manner of Come the Moone increasing, the being in Cancer, Libra, or Aquarius.
- Set or sow** all kind of Seedes the Moone in Arie, Taurus, Cancer, Virgo, Libra, Capricornus, Aquarius, or Pisces: But those Seedes whose Rootes are round, should be sown three or foure dayes before, or after the full Moone.

Certaine

White. 1620.

*Certaine, and short Rules, for the comforting of the
chiefe officiall members of the body of man.*

Things vvhich are good to comfort the head.

Lignum Aloes, Marisiam, Calingale, Mulske, Rosemarie,
Roses, Camomell, Rew, Frankensence, Nutmegges, Hyssop,
Balne, Mynts, Spike, and Gladen.

Things good for the Eyes.

Fenell, Celendine, Agremont, Eybryght, Aerdine, Roses, Clones,
and cold Water.

Things good for the Stomacke.

Nutmegs, Diganum, Corall, Clometwood, Quince, Saffron,
Olibanum, Agrimony, Fumetorie, Cloues, Lignum aloes, Co-
riander, Masticke, and Spodium.

Things good for the Heart.

Saffron, Clones, Cinnamon, Corall, Lignum aloes, Mace, Mi-
rabolans, Beales, Marisiam, Mulske, Buglasse, Nutmegs,
Boage, Rosemarie, and Serwall.

Things good for the Liver.

Liverwort, great Raisons, Clometwood, Agrimony, Saffron,
Clones, Endive, Sanders, Fenell, Rosewater, Violets, Plan-
taine, Dragons, and Lettice.

Things good for the Lungs.

Almonds, Dates, Raisons, Hynderbaire, Licopice, Citicompane,
Lungwort, Distaces, and Benedies.

Meates hurtfull for the Teeth.

Nattes, Meates very hot, warme drinke, Sweete meates and
drinckes, Radish rootes, Hard meates. Bitter meates, Milke,
much Clointing, Leekes, Fatte of Fish, Colworts, & Lermons.

Things hurtfull to the Eyes.

Garlicks, Onions, Radish, Drunkemess, Lecherie, sweete and
thicke Wines, Salt meates, Coleworts, all Husse, Must, Wine,
Dust, Smoake, Fire, and reading presently after supper.

A Prognostication.

Rules of Mensuration.

A fingers bredth is foure Barly cornes in thickness; and an Inch
 three Barly cornes in length: A handes bredth foure fingers:
 A span is three handes bredth: A foot is foure handes bredth:
 A Geometrical Pace is sixe foot. an English Peache is sixe foot $\frac{1}{2}$.
 A Furlong is a hundred, & twenty five paces, or sixe hundred, twenty
 and five foot: An English Furlong is sixe hundred and thre score
 C 3 foot,

A Prognostication.

feet, as a hundred thirtie two paces: A League is a thousand and five hundred paces: An Italian Mile is a thousand paces, or eight Furlongs: A common German Mile is thirty two Furlongs. An English Mile is eight Furlongs: An Acre is forty Pearches in length, and four in breadth.

An Explanation of a new and easie Kallen-

der heere following, for this present Year,

1620.

NOte that every Month conteyneth three Colunnes, (the figures for the number of dayes receiued) the first Colunne toward the right hand conteineth the Weekes dayes & Sunday letter. The second, the Signe wherein the Moone is euery day. And the third, the Changes and Quarters of the Moone. Note that the being placed this way) doth signifie the first Quarter; and this way (the last Quarter. This the Full Moone . And this the new Moone . Note also, that the figures ouer the head of the Moones, signifies the houre of her Change; and the Letters vnderneath, the time after noone. or after midnight. N. standing for after noone till Midnight, and M. after Midnight till Noone: As for example. Against the ii. day of January, being Sunday, I doe finde the Moone in V. Aries, and is thus placed), which is the first Quarter, at 8. of the clocke after noone, which is 8. of the clocke at night. Again, on the 8. day of March, being Wednesday, I find the Moone in η . Virgo, and figured to this , which is the Full Moone, at 10. of the clocke after midnight, which is ten of the clocke in the Morning. &c.

Note also, that at the head of euery Month is placed the Rising and Setting of the Sunne for the middle of euery Month: as for example, As for example for the midst of March, the  Sun riseth at 5. of the clocke, and 18. minutes; and setteth at 6. and 12. minutes.

It also conteyneth the Holy-dayes, and Feastes, both mouable and immouable; with the beginning & ending of the Termes: Easter-day is on the 16. day of April. Whitunday on the 4. day of Iune: Terme begins on the 3. of May, and endeth on the 29. of the same moneth, &c.
